Expression of Interest

After an interesting and informative dialogue with WWF about the Sejerø Seascape project, I, on behalf of the Environmental Association Clean Nekselø Bay (Ren Nekselø Bugt - RNB), am pleased to confirm our interest in the project. Nekselø Bay is located between Nekselø and the landscape of the Odsherred hills in the inner part of the Sejerø bay. Nekselø Bay is thus a "bi-bay" of Sejerø Bay and therefore highly dependent on the natural state of Sejerø Bay.

RNB is dedicated to caring for and contributing to the optimal natural state of Nekselø Bay and the surrounding areas. The association has approx. 170 members, consisting of both permanent residents and summer house owners, and has a Facebook group with more than 700 members. RNB recognizes the Sejerø Seascape project's importance and the urgent need for action for active nature restoration in Sejerø Bay. Nature conservation and protection of the sea and coasts around Sejerø Bay will improve conditions for biodiversity and at the same time have positive effects on local society and recreational opportunities.

RNB is firmly committed to supporting the project, for example, by communicating about the project via news reports on RNB's website, Facebook group, and via other relevant projects and contacts in local media and other organizations.

We look forward to following this exciting new project and sincerely hope that application for the necessary funds for realization of the project will be successful.

Best regards,

Henrik Harboe

Chairman of the Environmental Association Clean Nekselø Bay (Ren Nekselø Bugt - RNB)
